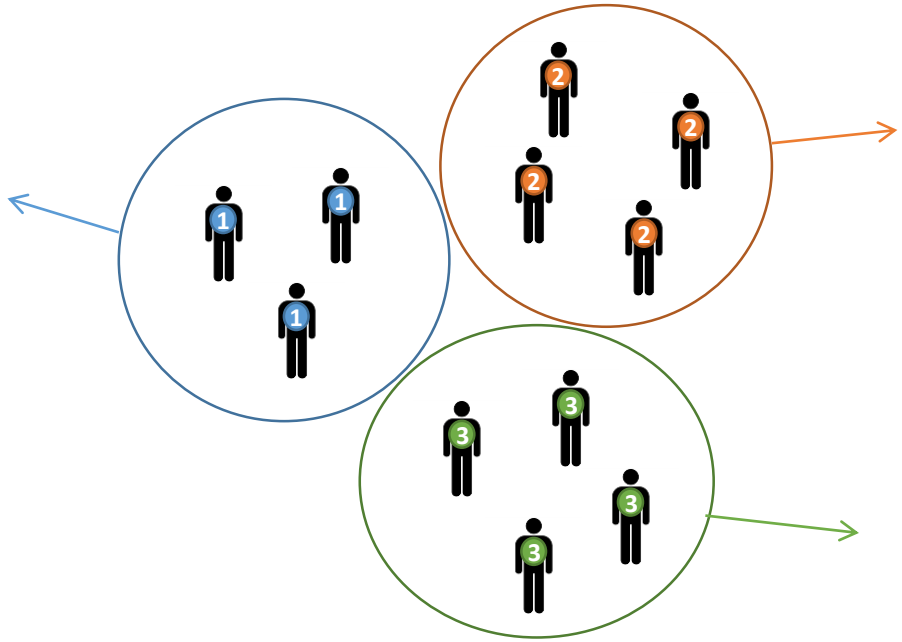
Analyzing Cohorts

Cohort Analysis October 2015

What is cohort?

Cohort: A cohort is a group of people who share a common characteristic over a certain period of time.



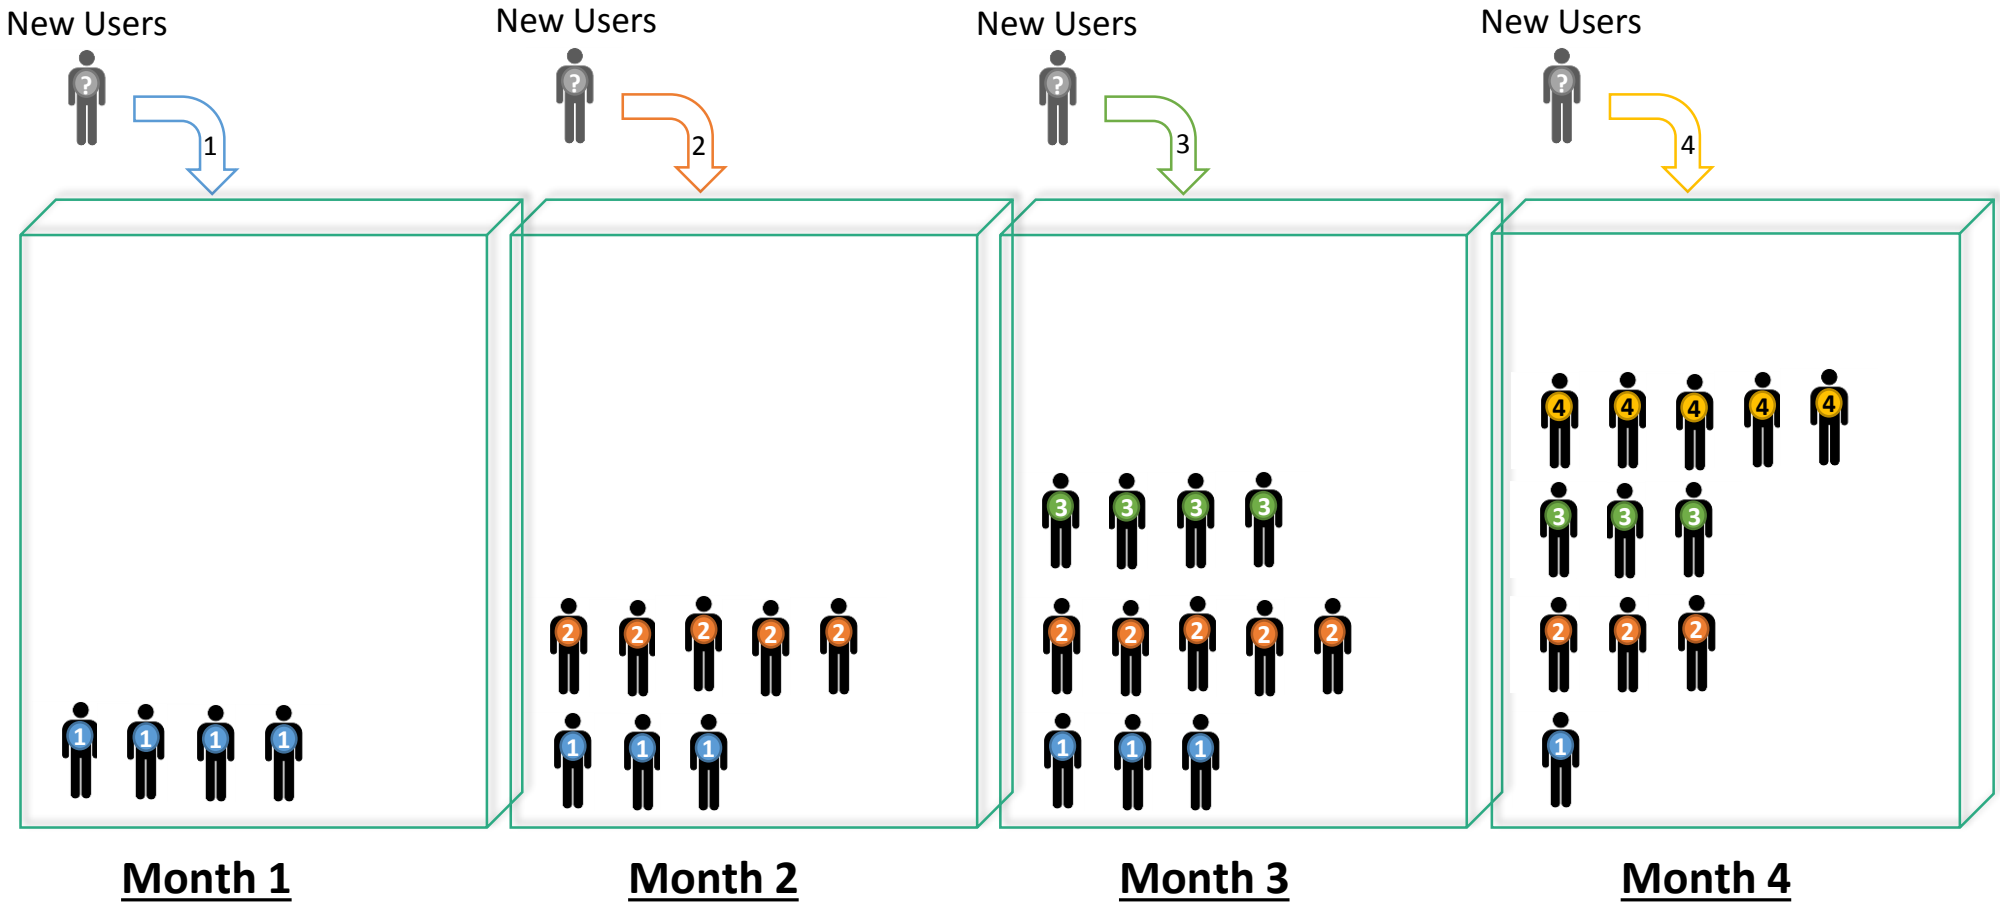
For our cohort, we agroup the users by the first time that he created a booking and the first time that he offered a ride with bookings.
This analysis is important to measure the impact of an action. In other words, analize the behavior of users who share the same characteristic, like users who use our product for the first time after a new feature, for example.

Obs.: We didn't count trips without passengers.

Cohort size: The number of unique users who use our product for the first time on the report month.

Retention rate: The number of unique users returned over the cohort size.

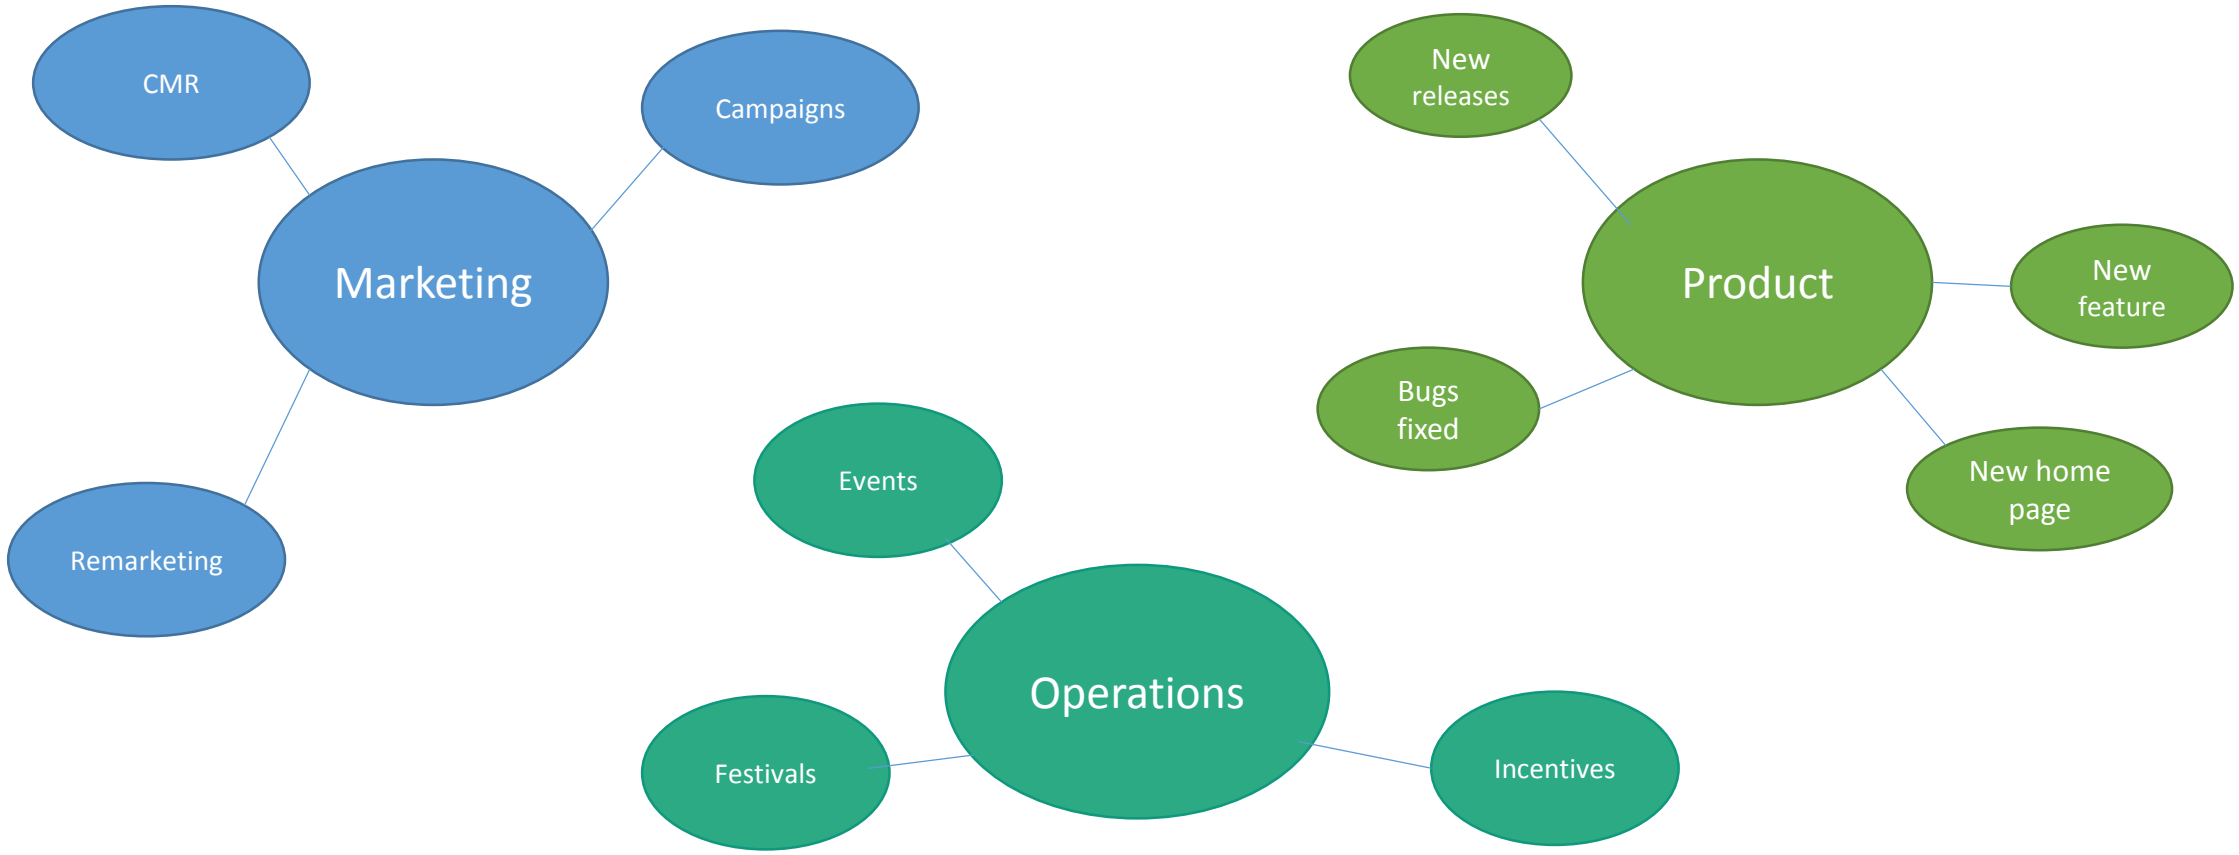
What is cohort?



New Users (cohort size)	4	5	4	5
Users with action on the month	4	3 + 5 = 8	3 + 5 + 4 = 12	1 + 3 + 3 + 5 = 12

What influence the cohort?

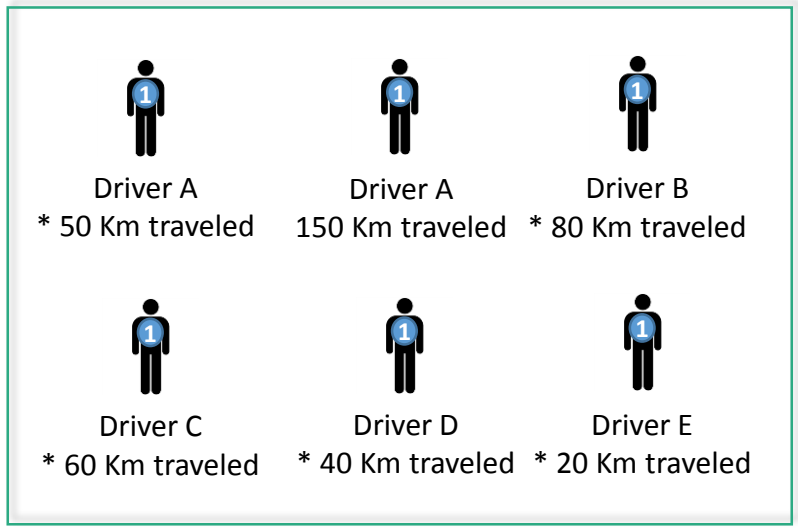
Cohort is important to see the performance of our product, influence of new features or regional incentives. But there a lot of other factors that changes the cohort:



Retention Rate 1 (RR1)

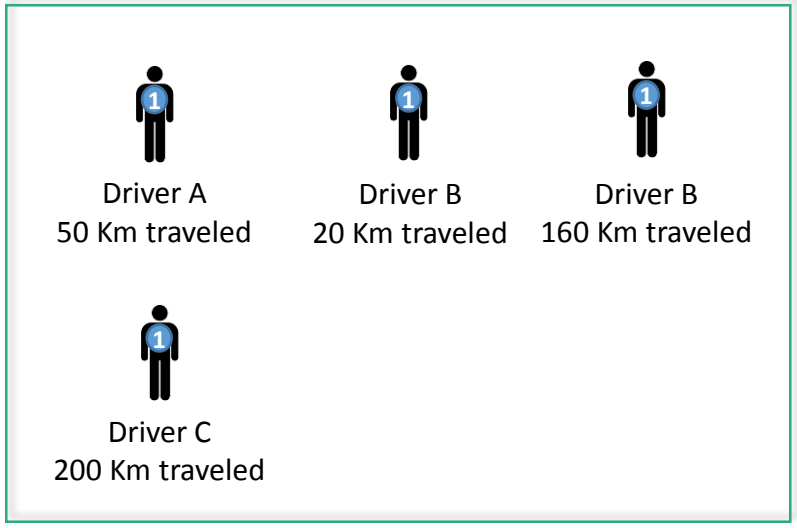
Retention rate 1 (RR1): takes the count of individual passengers throughout the time into consideration. Please follow the below example to illustrate the concept

$$RR1 = \frac{number\ of\ unique\ users\ returned}{number\ of unique\ users\ on\ their\ first\ ride\ (cohort\ size)}$$

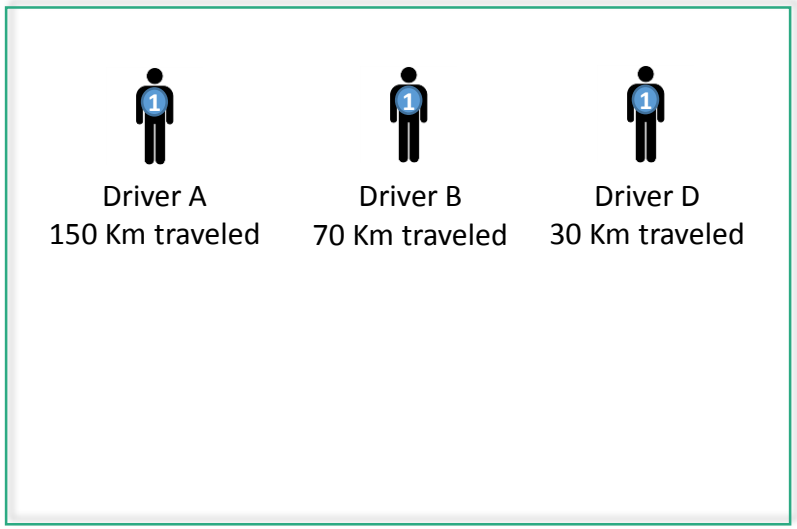


* First time using Tripda

Month 1



Month 2



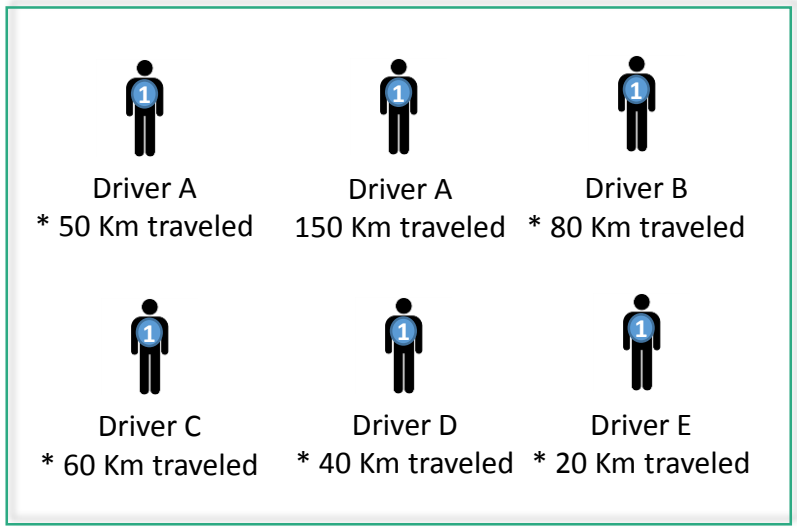
Month 3

	Same month	1 month	2 month
RR1	1/5 = 20%	3/5 = 60%	3/5 = 60%
RR1 - Accumulated	1/5 = 20%	(1 + 2)/5 = 60%	(1 + 2 + 1)/5 = 80%

Retention Rate 2 (RR2)

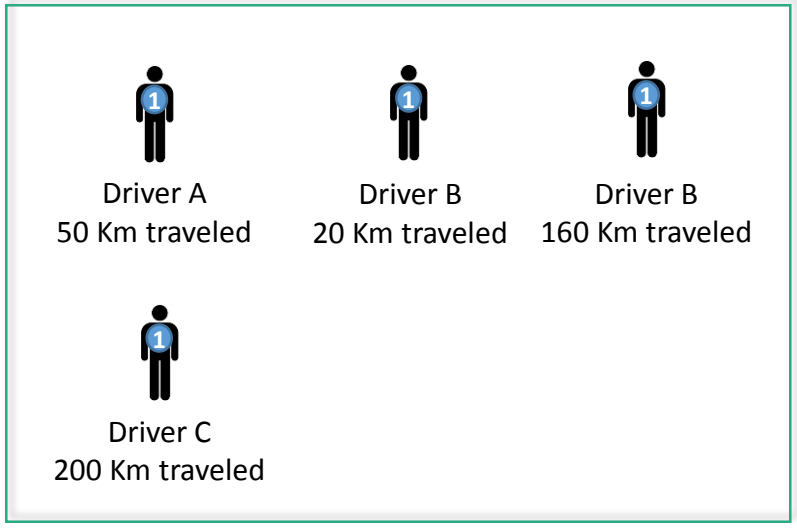
Retention rate 2 (RR2): takes the sum of the total distance traveled by the chosen cohort throughout the time into consideration. Please see the below example to ilustrate the concept

$$RR2 = \frac{total\ distance\ traveled\ of\ the\ users\ returned}{total\ distance\ traveled\ of\ users\ on\ their\ first\ ride\ (cohort\ size)}$$

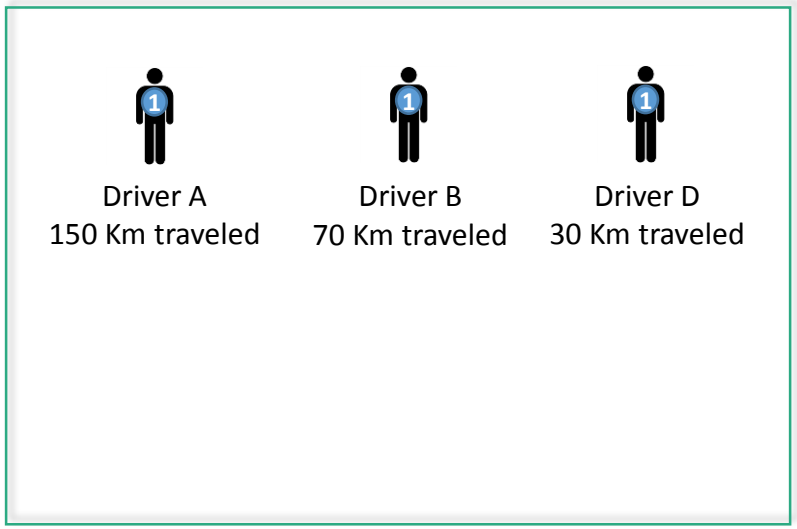


* First time using Tripda

Month 1



Month 2



Month 3

	Same month	1 month	2 month
RR2	150/250 = 60%	430/250 = 172%	250/250 = 100%
RR2 - Accumulated	150/250 = 60%	(150 + 430)/250 = 232%	(150 + 430 + 250)/ 250 = 332%

Analyzing Cohorts

Cohort Analysis October 2015

Kinds of data

- There are two kinds of data: reporting and exploratory.
  - Reporting: Is predictable. Have number that we expect to see and exceptions brings us questions about it.
  - Exploratory: Is speculative. Try to answer some questions many times from reporting data.

IMPORTANT: Cohort is not a exploratory data! Cohort must to bring more questions about the users behavior and how our acts influences them.

Example of cohort

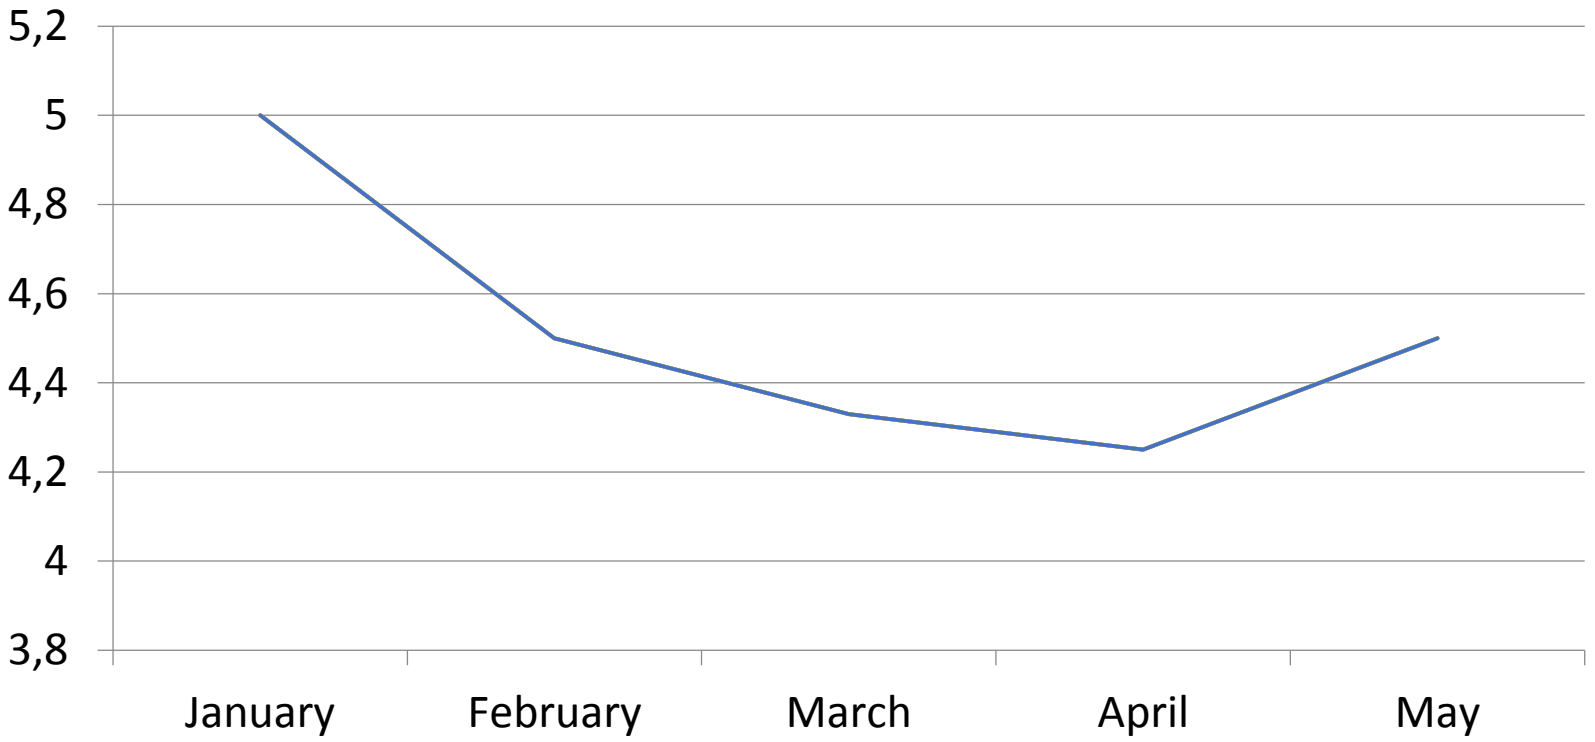
For example:

Is this company growing or stagnating?

	January	February	March	April	May
Avg spent by customers	$5	$4.5	$4.33	$4.25	$4.5

Yes? No?

We don't know!



Example of cohort

	January	February	March	April	May
Avg spent by customers	$5	$4.5	$4.33	$4.25	$4.5

Grouping the users by the month of the first buy, we can see that the customers from january are not returning.

In other side, the costumers from March, April and May spent much more on the current and forward months.

January	$5	$3	$2	$1	$0.5
February		$6	$4	$2	$1
March			$7	$6	$5
April				$8	$7
May					$9

It's easy to see that this company is not stagnating, but there are so many question about these numbers, like:

- What made the customers spend more? Is a bug fixed or a new home page?
- How can we bring back the january's customers? By an e-mail marketing telling about new features?
- For what reason the customers from may spend more? Is because an event? How can we keep these customers using our product?

Example of cohort

Now the cohort on the usually format. All data are bring to the left and the columns is how many months passed by from the referent month.

Cohort	1	2	3	4	5
January	$5	$3	$2	$1	$0.5
February	$6	$4	$2	$1	
March	$7	$6	$5		
April	$8	$7			
May	$9				
Average	$7	$5	$3	$1	$0.5

Cohort	1	2	3	4	5
January	100%	60%	40%	20%	10%
February	100%	67%	33%	17%	
March	100%	86%	71%		
April	100%	88%			
May	100%
